

AutoSquare Automation

A Web Automation Regression Testing (/BDD) Tool

MyriadComputing.com

Introduction

Nileshkumar Shegokar

Total 11 years of experience in IT services and Product Development with expertise in IoT, Cloud, Dev Ops, Cyber Security, Automation Testing and Java Technology stack. Been working with companies like Diaspark, Persistent Systems, Hitachi Consulting & Capgemini.

Testing Market Growth

Growth expected from 2018-2024

Compound Annual Growth Rate (CAGR) of 17.7%

- The Automation Industry is expecting growth of 19.27 billion by 2024
- The market is growing in APAC region
- BDD is a new trend in all types of testing, it's a future

Challenges with Software Testing

Delivery Time

As usually build deliveries get delayed in development process, the timely QA builds are always a challenge, Sprint -1 QA build might help but still the deliveries are critical for bigger deliverables

Quality Assurance

Quality Assurance is the first feature the Automation testing is meant for, but it usually gets compromised due to timeline

Hidden Costs

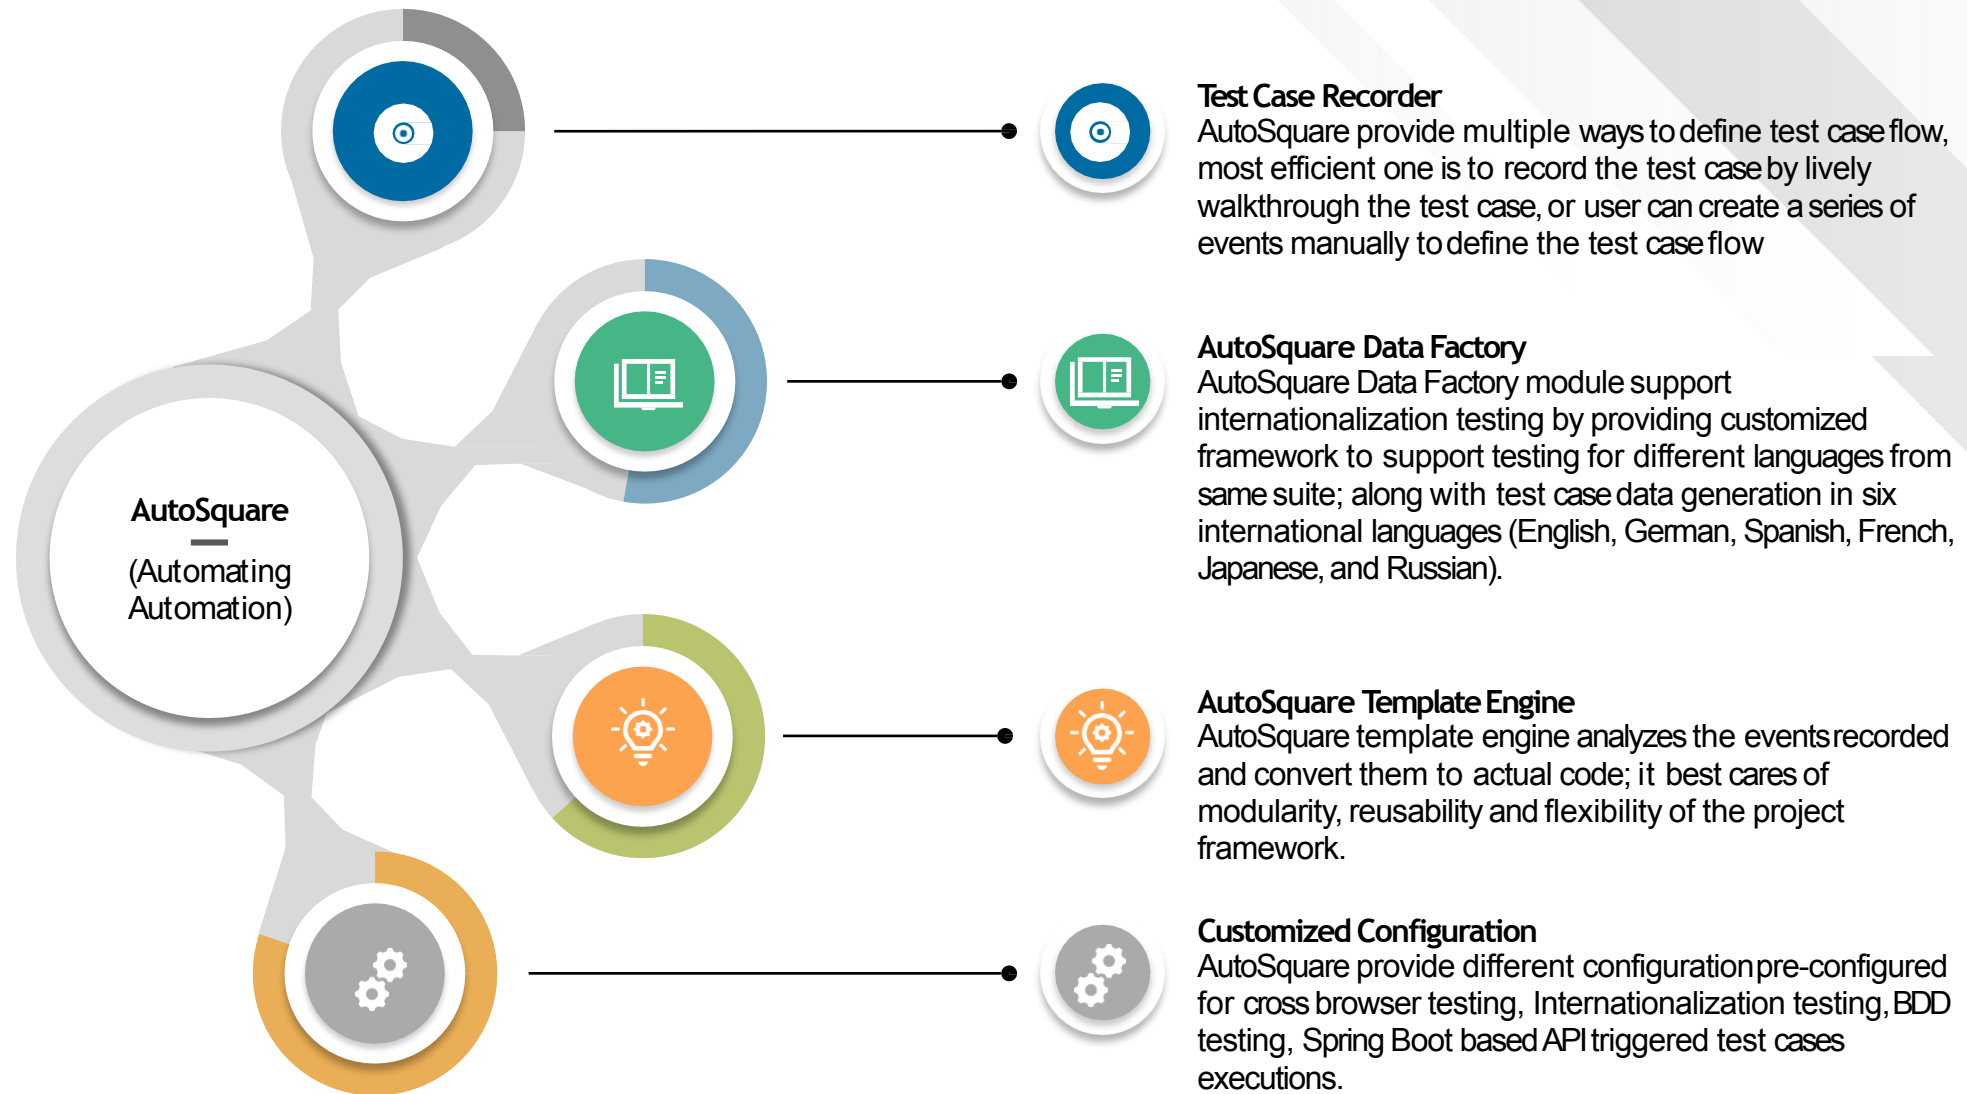

Continuous change in technology always brings cost in terms of hiring new talent, giving trainings to existing resources and sometime it even impacts in terms of loss of business.

Development Process Bandwidth

Features

New Process Cycle

01

- Record test cases using AutoSquaretool
- Create event manually (if required)
- Configure data generation streams

02

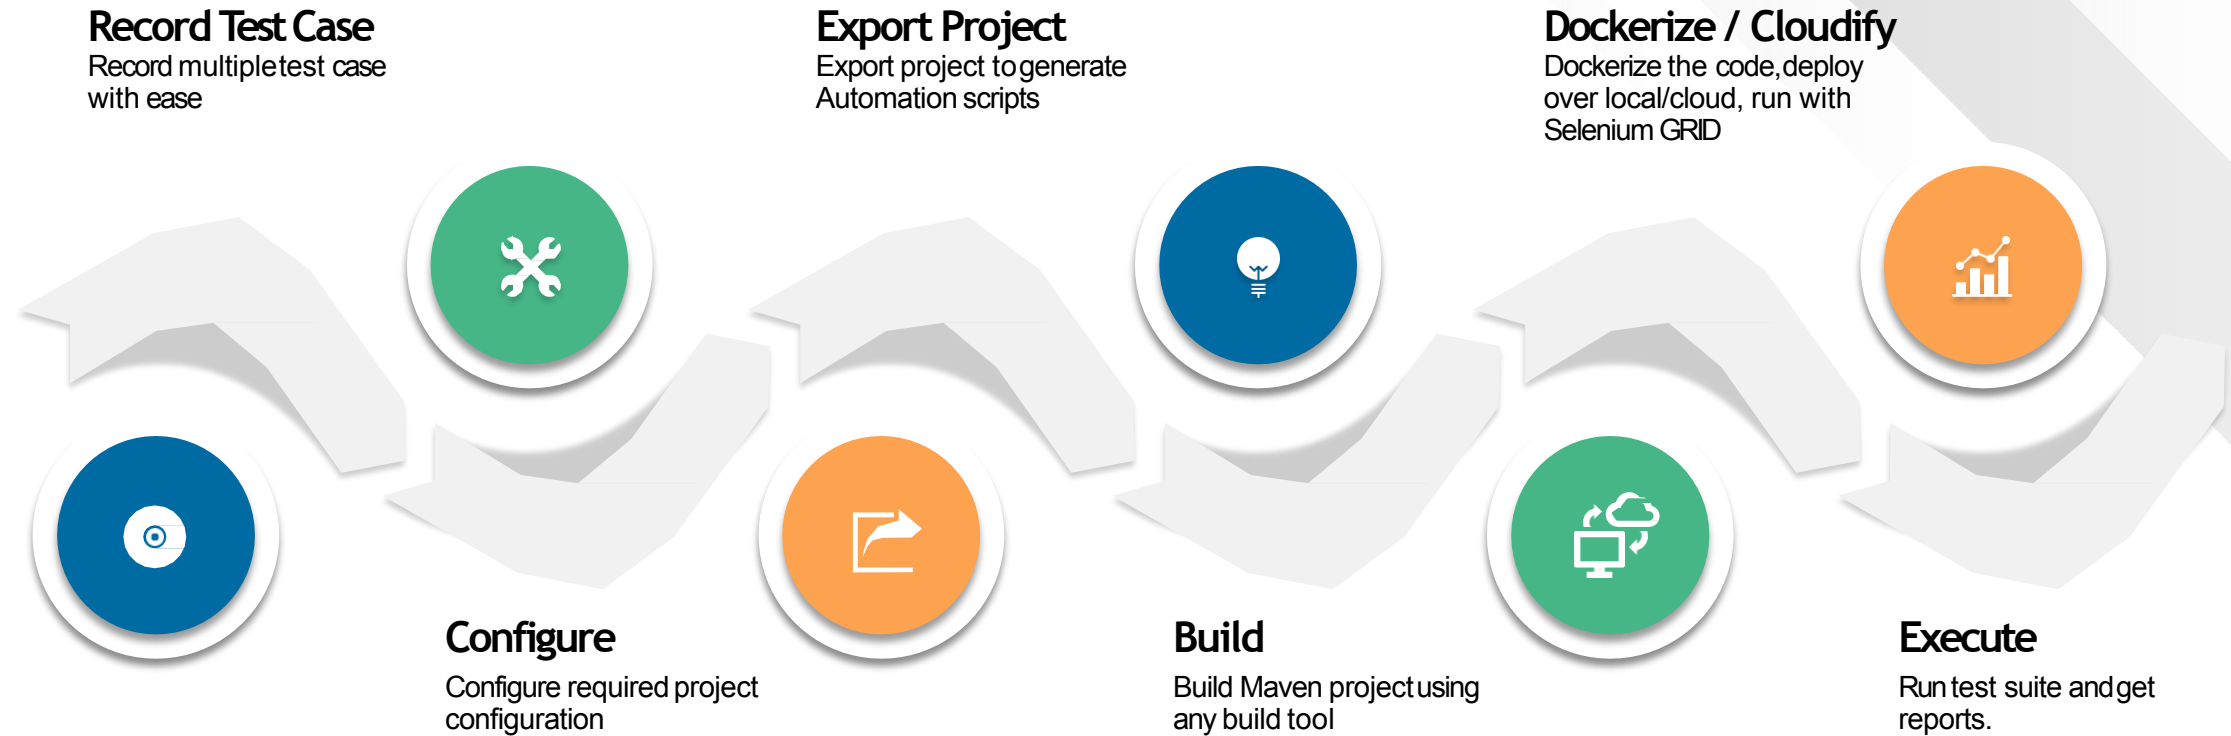

- Setup parameters for Maven project
- Define Project configuration
- Setup Internationalization for data generation
- Setup cross browser script and other configuration

03

- Deploy code on local environment
- Dockerize the code
- Deploy in cloud
- Test through Selenium GRID

The New Process

The build process may vary based on configuration requested during the project configuration step, as the code is ready to deploy; It ensures to bring your code deployment 80-90% faster than usual manual script writing approach.
